

Apple Quicktime RTSP Streaming

Quicktime supports RTSP format the same as VLC player.

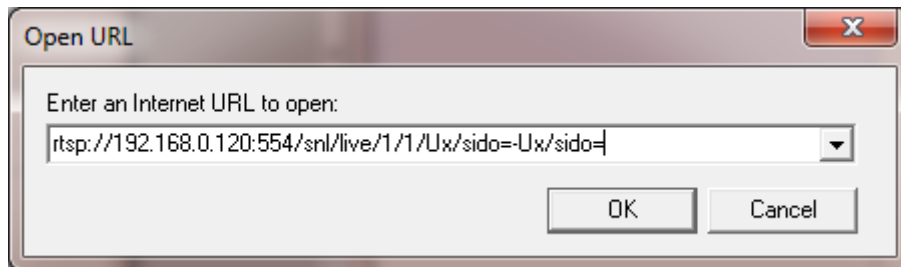

1. From the *file* option you select the open URL option as below:

You now enter the details as returned from the RTSP Tool.Download from internet to use this, or supplied as part of the tool pack.

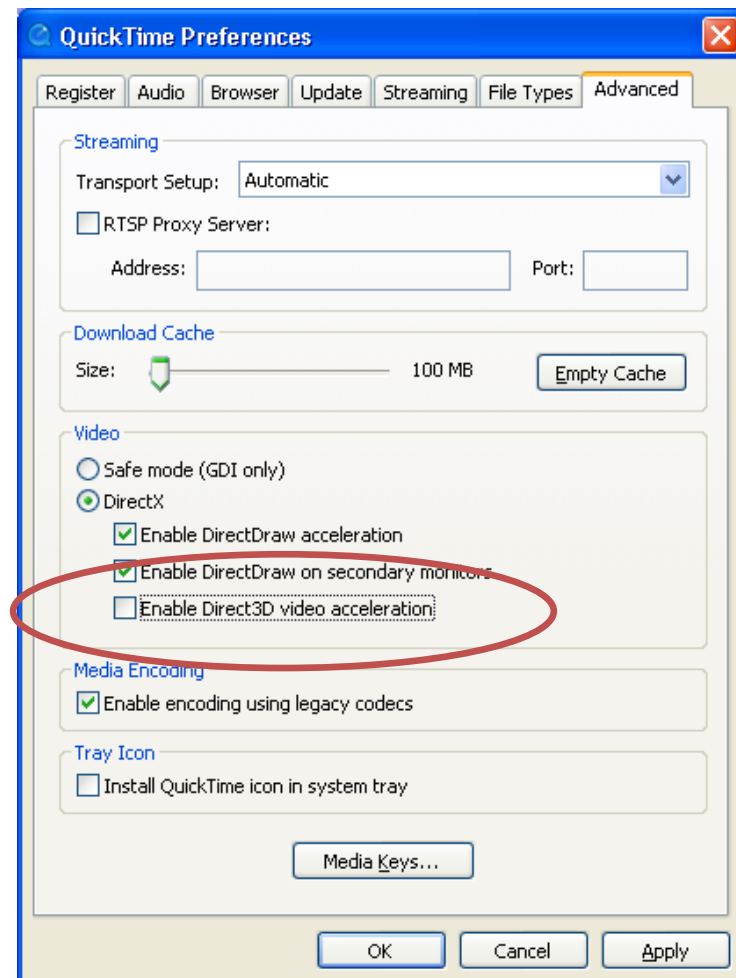

After this you click **OK**. Quicktime will start to buffer and open the video stream.

Again the stream can be changed also to reflect the stream id as required.

One some PCs we have found there is issues playing quicktime streaming, Different PCs with different graphics cards, including versions of windows have known to be a problem.

Below is the setting you will need to disable if you are unable to see any video streaming.

Just un-tick the *Enable Direct3d video acceleration* you can then re-try the streaming. For references you can check the settings match your system as shown above also.
