LENS

This camera is not supplied with a lens. Please purchase a lens that fits your needs.

- Notes :
- If the lens has fingerprints or other objects on the lens the image quality might be affected.
 - A higher quality lens provides a better picture.

★ Adjust the focus if the camera is out of focus for changing between daytime mode and nighttime mode

1. Installing a CS-mount Lens

- ⓐ Remove the protective cover and connect the lens into the camera by turning it in a clockwise direction.

ⓑ Installing Auto Iris Lens

Connect the lens plug to the auto iris connector on the side of the camera.

2. Installing a C-mount Lens

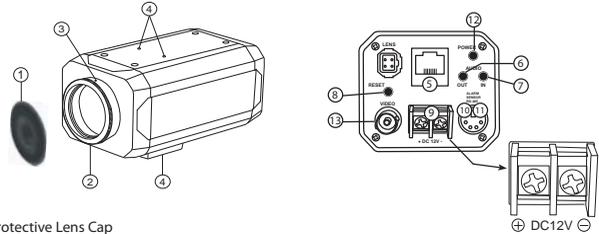

- ⓐ Remove the protective cap and connect the c-mount adapter turning it in a clockwise direction.
- ⓑ Connect the lens into the camera by turning it in a clockwise direction.

Installation Guide

Part & Functions

① Protective Lens Cap

② CS-Mount Lens Adapter

③ BACK FOCUS Lock Screws

These are two screws used to adjust the back focus of the camera which is normally set on factory default. These must be loosened (using an L-wrench) before the camera can be focused. After readjusting, lock the screws into place.

④ Tripod Mounting Holes

You can attach a mount to the camera from either the top or the bottom.

Connector	Function
